### Storm Analysis

No further QuickLooks will be posted for this storm unless oceanographic conditions warrant and/or the <u>National Hurricane Center</u> (NHC) issues a new tropical storm or hurricane warning for the U.S. or its territories.

As of 9/27/2017 21:00 EDT, water levels along the Atlantic coast from Wrightsville Beach, NC to Ocean City, MD, including the lower Chesapeake Bay and Pamlico Sound are elevated and range between 1.2 and 2.1 feet above tide predictions levels as Maria moves out to sea.

Wind speeds along the Mid-Atlantic coast range from 10 to 20 knots with gusts up to 30 knots. Barometric pressure has stabilized or begun to rebound across the region.

Water Level and Meteorological plots available below are updated automatically. A line denoting <u>Mean Higher High Water</u> (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional real-time and historical inundation information for select stations affected by this storm, please see Coastal Inundation Dashboard.

For additional data, please see the <u>Center for Operational Oceanographic Products & Services</u> website. For more information or archived products and reports, please see the <u>Storm QuickLook</u> Homepage.
